PROFILE

Backend developer focused on PHP and Laravel since December 2024. I build APIs, business workflows, background jobs and production deployments. Comfortable owning delivery from feature work through Docker/AWS release checks. Experience includes live client platforms, internal tools, teaching and hackathon delivery.

CORE SKILLS

Backend	PHP, Laravel, REST APIs, Queues & Workers, Artisan Scheduler, Blade, Livewire, AJAX
Data	MySQL, MongoDB, PostgreSQL, DBF exports, Frappe / ERP APIs
DevOps	Docker, AWS EC2 / S3 / SES, Nginx, PHP-FPM, Linux, SSL, Git

PROFESSIONAL EXPERIENCE

Laravel Developer — Shine Infosoft, Ahmedabad May 2025 – Present

- Build and maintain Laravel backends, APIs and integrations for production business applications.
- Own application deployments end to end across Docker, AWS EC2, Nginx, PHP-FPM and SSL — including environment setup, release verification and production troubleshooting.
- Contribute to a live travel-operations platform (Kesari Select): ERP-connected workflows, reliability improvements and operational features used by real teams.
- Improved ERP-to-finance data reliability with scheduled file generation, S3 staging, export logs and recovery checks for missed records.
- Observed one production page load improve from about 15s to 3s (~80% faster) after targeted backend performance work.

PHP Developer — Magecurious, Ahmedabad Dec 2024 – May 2025

- Delivered PHP backend enhancements, fixed business-workflow issues and collaborated through review and releases.

SELECTED PROJECTS

Kesari Select | Laravel / PHP / ERP APIs / Docker · Client platform

- Backend work on a live travel-operations product used across Sales, Land Ops, Air Ops, Cashier, Product, Finance and other teams.
- Platform context: 10K+ **total** inquiries, roughly 80–100+ new inquiries daily, and an estimated 700–1,000 internal users. Team-built product — not sole authorship.

Email Campaign Platform | Laravel / MySQL / Queues

- Built Excel-to-campaign workflow with strict validation, rich editor, {Name}/{Email} placeholders, test emails, pause/resume and progress tracking.
- Batch-optimized ingestion inserted 10K+ recipient rows in under 4 seconds (reported benchmark). Actual sending runs asynchronously via Laravel Queues/Workers — import speed is not email delivery speed.

Smart Print + HRM System | Laravel / MySQL / RBAC

- Smart Print: improved inquiry intake, permission-aware actions, soft deletes and job-sheet data consistency in an existing print-operations app.
- HRM: internal HR modules covering employee records, attendance, leave workflows and reporting.

DevCommand AI | TypeScript / React / Express · Experimental

- Personal experiment exploring GitHub-connected task planning, isolated worktrees and agent execution workflows. Not a production service.

EDUCATION

MCA — Master of Computer Applications (pursuing, final year)

BCA — Bachelor of Computer Applications (completed)

ACHIEVEMENTS & COMMUNITY

- **Grand Finalist — New India Vibrant Hackathon 2023**, Pandit Deendayal Energy University (PDEU). Selected from the regional round; built and presented a backend-focused solution under time pressure; defended architecture decisions before judges and mentors.
- **Workshop Facilitator — Dr. Subhash University** (Aug 2026, Junagadh). Conducted a practical Git + Docker workshop for BCA & MCA students with live demos and mentoring.
